Tejgaon Dhaka Bangladesh

Frontend Developer

rabbiulislam5506@gmail.com | +8801825805506

OBJECTIVE

I am a dedicated web developer skilled in React, Next.js, and TypeScript. I want a Frontend Developer Internship where I can use AI tools to work better, build responsive user interfaces, and help the company grow. I am ready to learn from senior developers, fix daily bugs, and share the team's workload.

SKILLS

Frontend Development: JavaScript, TypeScript, [Next.js](#), Recat, Hero Ui, Tailwind CSS

Backend Development: Express.js, Node.js, REST APIs

Databases: MongoDB, PostgreSQL, Prisma.

Tools & DevOps: Git, GitHub, Docker

AI-Assisted Development: ChatGPT, Claude, GitHub Copilot (for optimized coding and debugging)

PROJECTS

1. Campus Ride

[Live-link](#) |

Project Overview: A comprehensive web app designed to digitalize university transport with real-time location tracking, role-based dashboards, and instant seat booking.

Project Purpose: To digitize university transit with live bus tracking and instant seat booking.

Tech Stack: Next.js, React, express.js, node.js, MongoDB, BetterAuth, Framer Motion

Key Features:

- **Live Bus Tracking:** Real-time GPS tracking and dynamic route progress monitoring.
- **Seat Reservation:** Real-time capacity checking and instant ticket booking.
- **Smart Search:** Date and route-based dynamic filtering for available buses.
- **Email Alerts:** Automated pre-departure notifications for passengers.

Performance Optimization: Ensured fast loading and seamless routing with Next.js 16, featuring smooth loading states and fully responsive layouts for all devices.

2. Easy-RentBD

[Live-link](#) |

Project Overview: Full-stack rental marketplace connecting owners and tenants. Features include seamless property management, real-time rent requests, and advanced location-based search filtering.

Tech Stack: Next.js, React, TailwindCSS, Better Auth, Node.js, Express.js, MongoDB, JWT, ImgBB API

Project Purpose: A property rental platform for owners to list spaces and tenants to search/rent homes.

Key Features:

- **Location-Based Sorting:** Filter properties by proximity to user location.
- **Rent Request System:** Enable real-time approval or rejection of tenant requests.
- **Advanced Filtering:** Search by price, size, category, and amenities.
- **Dashboard & Wishlist:** Track property status and save favorites easily.

Performance Optimization: Integrated ImgBB API for cloud image hosting, preventing server overload while enabling fast, drag-and-drop property uploads.

3. Turf-Sports Facility Booking Management System

[Live-link](#) |

Project Overview: Full-stack platform enabling sports enthusiasts to discover, book, and manage various sports venues with a centralized reservation system.

Tech Stack: Next.js, Node.js, Express.js, Better Auth, MongoDB

Key Features:

- **Smart Booking Engine:** Automated price calculation and slot management to prevent double-bookings.

Performance Optimization: Enhanced security and session persistence by storing JWT tokens in secure HTTP-only cookies.

EDUCATION

Bachelor of Computer Science and Engineering (CSE)

SouthEast university, <Final year> CGPA: 3.46 / 4
